

1. Write a short paragraph in your own words defining what a 'program' is and give one real-life example from any app you use daily (like Instagram, Zomato, or Paytm).

A **program** is a set of instructions written by a programmer that tells a computer what to do. It helps the computer perform specific tasks, solve problems, and produce the desired output. Programs are written using programming languages such as C, Python, or Java.

**Real-life example:**

The **Instagram** app is made up of many programs. When I open Instagram and tap the **Like** button on a post, the program records my like, updates the total number of likes, and displays the change instantly on my screen.

2. List three popular programming languages you have heard of, and for each, mention whether it is usually compiled, interpreted, or can be both.  
**Hint:** Think of languages like Java, Python, and JavaScript.

**Programming Language Compiled / Interpreted**

|            |                                                                           |
|------------|---------------------------------------------------------------------------|
| Python     | Interpreted                                                               |
| Java       | Both (Compiled to bytecode, then interpreted/JIT compiled by the JVM)     |
| JavaScript | Interpreted (modern engines also use Just-In-Time compilation internally) |

3. Draw a flowchart (on paper or using any online tool) for the process of booking a movie ticket on BookMyShow, starting from opening the app to receiving the booking confirmation.

4. Write down the steps (as an algorithm, using simple numbered instructions) for ordering food on Swiggy — from opening the app to completing payment.

**Algorithm: Ordering Food on Swiggy**

1. **Start**
2. Open the **Swiggy** app.
3. Log in to your account (if not already logged in).
4. Allow or select your **delivery location**.
5. Search for a restaurant or food item.
6. Select the restaurant.
7. Choose the food items you want to order.
8. Add the selected items to your cart.
9. Review your order and update the quantity if needed.
10. Tap **Proceed to Checkout**.
11. Confirm the delivery address.
12. Apply a coupon code (optional).
13. Select your preferred payment method (UPI, Card, Net Banking, Wallet, or Cash on Delivery).
14. Complete the payment.
15. Receive the **order confirmation** and estimated delivery time.
16. **End**
