

1. Declare a string variable called `songTitle` and assign it the value 'Tum Hi Ho'. Print the length of the string using `strlen()`.

```
2. #include <stdio.h>
3. #include <string.h>
4.
5. int main() {
6.     // Declare and initialize the string
7.     char songTitle[] = "Tum Hi Ho";
8.
9.     // Print the string
10.    printf("Song Title: %s\n", songTitle);
11.
12.    // Print the length of the string
13.    printf("Length of the string: %lu\n", strlen(songTitle));
14.
15.    return 0;
16.}
```

2. Take input for two usernames (as strings) and compare them using `strcmp()`. Display whether they are the same or different.

```
#include <stdio.h>
#include <string.h>

int main() {
    char username1[50], username2[50];

    // Input first username
    printf("Enter first username: ");
    scanf("%s", username1);

    // Input second username
    printf("Enter second username: ");
    scanf("%s", username2);

    // Compare the usernames
    if (strcmp(username1, username2) == 0) {
        printf("Both usernames are the same.\n");
    } else {
        printf("Both usernames are different.\n");
    }

    return 0;
}
```

3. Copy the string 'Flipkart' into another string variable called `shoppingApp` using `strcpy()`, then print the value of `shoppingApp`.

Hint: Make sure to declare enough space for the destination string.

```
#include <stdio.h>
#include <string.h>
```

```

int main() {
    // Source string
    char source[] = "Flipkart";

    // Destination string
    char shoppingApp[20];

    // Copy the source string into shoppingApp
    strcpy(shoppingApp, source);

    // Print the copied string
    printf("Shopping App: %s\n", shoppingApp);

    return 0;
}

```

4. Build a small script that takes the user's full name as input and creates a username by copying only the first 5 characters using strcpy(). Print the generated username.

Constraint: If the name is shorter than 5 characters, use the full name as the username.

```

#include <stdio.h>
#include <string.h>

int main() {
    char fullName[100];
    char username[6];    // 5 characters + 1 for '\0'

    printf("Enter your full name: ");
    fgets(fullName, sizeof(fullName), stdin);

    // Remove the newline character, if present
    fullName[strcspn(fullName, "\n")] = '\0';

    // Check the length of the name
    if (strlen(fullName) < 5) {
        strcpy(username, fullName);
    } else {
        strncpy(username, fullName, 5);
        username[5] = '\0';    // Null-terminate the string
    }

    printf("Generated Username: %s\n", username);

    return 0;
}

```
