

1. Install GCC on your computer and verify the installation by running `gcc --version` in your terminal or command prompt.

```
PS C:\Users\RIDHAM> gcc --version
```

```
gcc.exe (MinGW.org GCC-6.3.0-1) 6.3.0
```

```

```

2. Open VS Code or DevC++ and create a new file named `hello.c`. Write a C program that prints 'Hello, Instagram World!' to the console.

```
3. #include <stdio.h>
4.
5. int main()
6. {
7.     printf("Hello, Instagram World!\n");
8.     return 0;
9. }
```

3. Identify and label the header, main function, and return statement in your `hello.c` program using comments.

```
4. // Header file
5. #include <stdio.h>
6.
7. // Main function
8. int main()
9. {
10.     printf("Hello, Instagram World!\n");
11.
12.     // Return statement
13.     return 0;
14. }
```

4. Compile your `hello.c` file using the GCC command line (`gcc hello.c -o hello`) and run the output file to display the message in your terminal.
Hint: On Windows, the output file will be `hello.exe`; on Linux/Mac, it will be `hello`.

```
PS C:\Users\RIDHAM\OneDrive\Desktop\SE Introduction To Programming> cd '.\Session 2'
```

```
PS C:\Users\RIDHAM\OneDrive\Desktop\SE Introduction To Programming\Session 2> cd practical
```

```
PS C:\Users\RIDHAM\OneDrive\Desktop\SE Introduction To Programming\Session 2\practical> gcc hello.c
```

```
PS C:\Users\RIDHAM\OneDrive\Desktop\SE Introduction To Programming\Session 2\practical> .\a.exe
```

```
Hello,World!
```

```
PS C:\Users\RIDHAM\OneDrive\Desktop\SE Introduction To Programming\Session 2\practical>
```
