

1. Use nested for loops to print a grid of emojis representing a 5x5 Instagram post feed, where each cell shows a 📷 symbol.

```
2. #include <stdio.h>
3.
4. int main() {
5.     int i, j;
6.
7.     for(i = 1; i <= 5; i++) {
8.         for(j = 1; j <= 5; j++) {
9.             printf("📷 ");
10.        }
11.        printf("\n");
12.    }
13.
14.    return 0;
15.}
```

2. Build a right-angled triangle pattern using nested loops, where each row displays increasing numbers starting from 1, similar to how a leaderboard on a gaming app shows rank numbers.

```
#include <stdio.h>

int main() {
    int i, j;

    for(i = 1; i <= 5; i++) {
        for(j = 1; j <= i; j++) {
            printf("%d ", j);
        }
        printf("\n");
    }

    return 0;
}
```

3. Create a pattern that prints a pyramid of stars (*) with 6 rows, centered like the loading animation you see on BookMyShow when a page is loading.
Hint: Use spaces to align the stars in the center for each row.

```
#include <stdio.h>

int main() {
    int i, j;

    for(i = 1; i <= 6; i++) {
```

```

        // Print spaces
        for(j = 1; j <= 6 - i; j++) {
            printf(" ");
        }

        // Print stars
        for(j = 1; j <= (2 * i - 1); j++) {
            printf("*");
        }

        printf("\n");
    }

    return 0;
}

```

4. Write code using nested loops to print a pattern of alternating 0s and 1s in a grid, like the checkered background seen in some Spotify playlist covers (e.g., for a 4x4 grid, alternate 0 and 1 in each cell).

```

#include <stdio.h>

int main() {
    int i, j;

    for(i = 1; i <= 4; i++) {
        for(j = 1; j <= 4; j++) {
            printf("%d ", (i + j) % 2);
        }
        printf("\n");
    }

    return 0;
}

```

5. Modify your pyramid pattern code to accept the number of rows as user input, so the user can set the height of the pyramid before printing.

```

#include <stdio.h>

int main() {
    int rows, i, j;

    printf("Enter the number of rows: ");
    scanf("%d", &rows);

    for(i = 1; i <= rows; i++) {

```

```
// Print spaces
for(j = 1; j <= rows - i; j++) {
    printf(" ");
}

// Print stars
for(j = 1; j <= (2 * i - 1); j++) {
    printf("*");
}

printf("\n");
}

return 0;
}
```
